

I CLAIM:

1. A waxer for automobiles comprising:
 - an upper having a top provided with a switch for controlling power to said waxer, a lower edge of said upper cover being provided with a plurality of hooks;
 - a seat on which is mounted said upper cover, with said hooks engaged with respective recesses of said seat, said seat being formed with a cavity;
 - rechargeable batteries arranged in said cavity;
 - 10 an electric motor disposed within said cavity and electrically connected with said rechargeable batteries and said switch;
 - a base on which is mounted said seat, said base being formed with a circular chamber at a central portion thereof and four tubular portions at four corners thereof;
 - 15 an eccentric block disposed within said circular chamber and eccentrically affixed on an output axle of said electric motor;
 - a sponge affixed to a bottom of said base; and
 - a cover enclosing said sponge.
2. The waxer for automobiles as claimed in claim 1, wherein said rubber member is a cylindrical member having two conical ends.

3. The waxer for automobiles as claimed in claim 1, wherein said seat is provided with an electric socket which is engageable with a power adaptor.
4. The waxer for automobiles as claimed in claim 1, wherein said rechargeable batteries are mounted in said cavity by a U-shaped member.
5. The waxer for automobiles as claimed in claim 1, wherein said electric motor is fixedly mounted in said seat by a mounting plate.
